General comment:	<i>In general, the paper has shown the academic value of the research. Started from the abstract, introduction and up to the results.</i>
Introduction:	<i>Even though, the title of the paper has indicated that the research area was in winning ratio improvement of tender aspect. Perhaps in the introduction part needs to mention the scope of research analysis. This is important, since the case study could be seen from the perspective of technical, commercial and some other aspects.</i>
Methodology:	<i>This part has shown the research framework of thinking and the steps taken.</i>
Results:	<i>This is just to answer my curiosity, why markup value used to outbid all competitors by 18%, showed with 11.4% expectation profit and 62.9% winning probability. If there was a typo error, you may make some revisions. But if there is some explanation, perhaps need to be stated in the paper.</i>
Discussion:	<i>The figure 3, shown that relationship mark up and expected profit is dropped quite drastically. This needs to be explained in the discussion part of the paper.</i>
